

FOR THE CLONE WOLF PIPELINE

Solen visual kit

Logo, colors, type, components and the vertical layout, plus a ready to use “Learn” post type with a full example. No character, only the brand.

Logo · Colors · Type · Components · 1080 x 1920 · Learn post

01 · INSIDE THIS KIT

What is in the folder and where it goes

Everything is in **design/clone-wolf-kit/**. Drop each part where the pipeline expects it.

PART	FILE	SUGGESTED PLACE
Logos	logo/solen-mark-*.svg, solen-mark-*.png, solen-lockup-*.png (white, green, dark)	engine/brand/logos/
Design tokens	tokens.json (colors, fonts, canvas, grid, radius)	engine/themes/ (map to your theme format)
Learn post type	LEARN-POST.md (beats, rules, caption templates)	engine/SCRIPTING.md and engine/GRAPHICS.md
Example frames	learn-example/frame-01 to 05.png (1080 × 1920)	reference for the look
This document	solen-visual-kit.pdf	reference

> **Honest note.** I have only seen the skill instructions, not your engine files. The layout numbers, safe zones and caption position in this kit are my proposal in the Solen look. If **style.json** or your theme already sets them, keep those and use this kit for the brand parts: logo, colors, type and components.

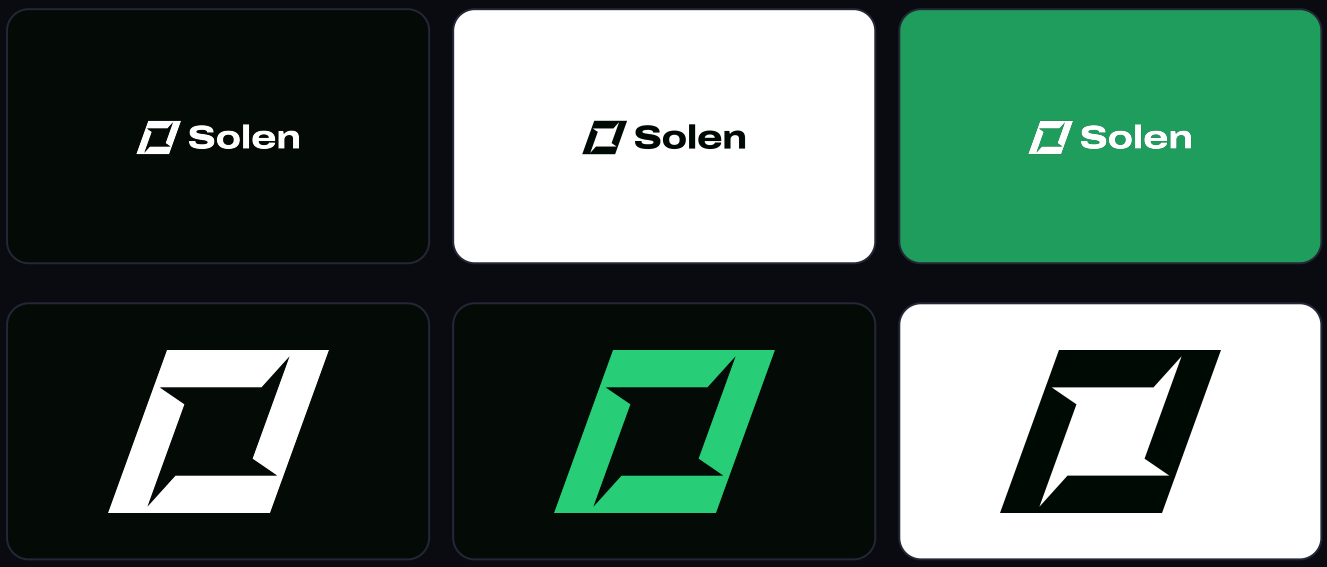

The look in one sentence

Dark fir green, one idea per frame, centered, big bold type, green light and soft glow for depth. Premium comes from light and motion, never from clutter.

02 · LOGO

The tilted rotating frame

A square frame cut into four blades and tilted, as if it were turning. Use the **mark** alone for small spaces and the **lockup** (mark + wordmark) everywhere else. The wordmark is set in Archivo Expanded 800.

Default	White lockup on the dark fir background #040A06.
On light	Dark lockup (#040A06) on white.
On green	White lockup on #1F9D5C.
Mark only	Avatars, favicons, corners of a frame. Green mark (#2BD07A) only on dark.
Clear space	At least the height of one blade (about a quarter of the mark height) on every side.
Minimum size	Mark 24 px wide on screen. Lockup 90 px wide.

Do

- Keep the original tilt and proportions.
- Use the files in logo/, never redraw it.
- One logo per frame, small and calm.

Do not

- Stretch, rotate again, outline or add effects.
- Put the mark on a busy photo with no overlay.
- Use another color than white, green or dark.

Muted
#93AA9C
Secondary text

Accent rule: green is the only color. Highlight one word per caption in light green, never more. Warning amber #FFB45B is for notes in documents only, not for videos.

Before you A/B test anything, check *3 things*

`Inter Tight 800, tight tracking (-0.04em), one italic gradient word`

ROLE	FONT	USE
Headline, captions	Inter Tight 800	Big, bold, tracking -0.035em to -0.045em, uppercase for punch captions
Body	Inter Tight 400 / 500 / 600	Support text in documents and carousels
Wordmark	Archivo Expanded 800 (font-stretch 125%)	Only the word “Solen” next to the mark
Labels, URL, numbers	JetBrains Mono 400 / 600	Pills, step counters, URL box, small captions, uppercase with wide tracking

Gradient word

One word or short phrase per frame can use the italic gradient from #B6F5C8 to #2BD07A. It is the only gradient on text.

The building blocks

Background

Solid #040A06, a 36 px grid at 5% light green, and a soft radial glow (green 30% to transparent) behind the main object.

```
background:#040A06;
grid:rgba(126,240,165,0.05) every 36px
glow:radial-gradient(closest-side, rgba(43,208,122,.30),transparent)
```

Label pill

JetBrains Mono 600, uppercase, wide tracking, light green on card color, 2 px line border, fully rounded. Used for “LEARN” and “1 OF 3”.

```
color:#7EF0A5; bg:#07130C;
border:2px solid #183323;
radius:999px
```

URL / keyword box

Light green fill #7EF0A5, dark text #040A06, JetBrains Mono 600, rounded 12 px. For “withsolen.com” and “Comment AUDIT”.

Mock UI card

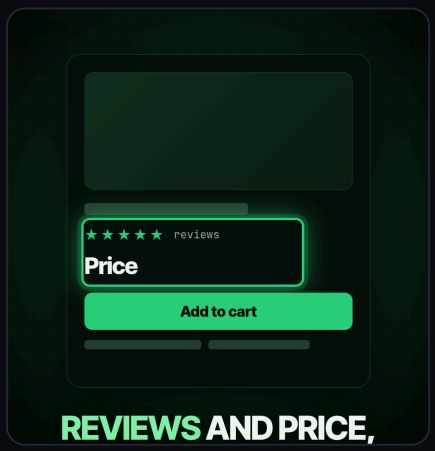

Panel #07130C, 2 px line border, 36 px radius, deep soft shadow. Grey-green blocks stand for images and text, so nothing in the mock can be mistaken for a real brand.

Highlight ring

6 px #2BD07A border, 22 px radius, a halo (18% green) and a glow. It circles the exact element the line names. One ring per frame.

Punch caption

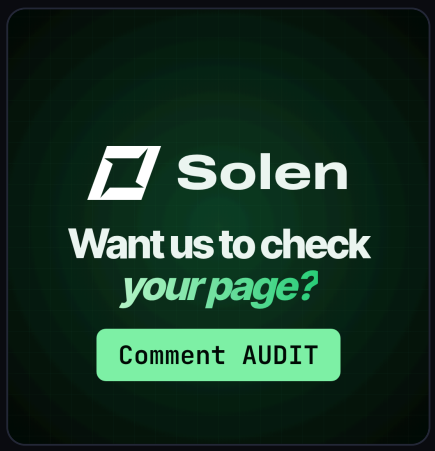

Inter Tight 800, uppercase, 84 px at 1080 wide, 2 to 4 words per line, black soft shadow, one word in light green.

Ring + pill + caption

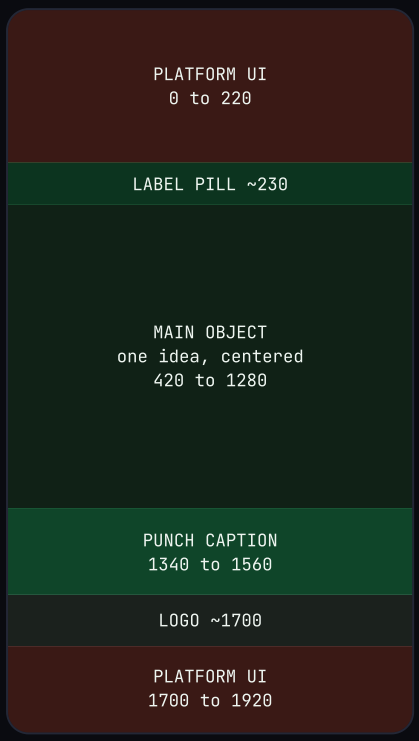

Hook + gradient word

URL / keyword box

1080 x 1920 zones and motion

Canvas	1080 × 1920, 30 fps
Side margins	90 px minimum
Top, bottom	Keep text out of the top 220 px and the bottom 360 px: apps put their own buttons there
Main object	Centered, about 70% of the width
Logo	Small, centered near the bottom, 90% opacity, never on the hook frame if it crowds the headline

Motion

- Something new on screen by about 2 seconds.
- Animate the verb: the ring draws itself, the number counts up, the object slides in.
- Soft ease, 0.3 to 0.5 s. No bounce, no spin, no flashing.
- Light does the depth: glow behind the object, slow push-in on mock UI.
- No graphic label that repeats the caption.

> These zones are a proposal. If your **style.json** has its own numbers, use them and keep the proportions of this diagram.

06 · POST TYPE

The Learn post: structure

A short that teaches one thing in about 30 to 40 seconds. The viewer leaves knowing a checklist they can apply today. Educational and honest: things to check and test, never guaranteed results.

TIME	BEAT	SPOKEN	ON SCREEN
0 to 3 s	**Hook**	Promise the checklist, with a clear payoff	Pill “LEARN”, big headline, one gradient word
3 to 6 s	**Open loop**	Tease the one most people skip	Punch caption only
6 to 30 s	**3 steps** (about 8 s each)	The thing, then why it matters, in one or two short sentences	Pill “1 OF 3”, mock UI, ring on the element, punch caption
30 to 36 s	**Payoff + ask**	One line to act on, then the CTA	CTA frame: logo, question, keyword box

Rules

- 3 steps, never more. One idea per frame.
- Show what you name: if the line says “button”, the ring is on the button.
- Every step answers: what to check, why it matters.
- No invented numbers, no revenue claims, no “+X%”.
- Money written as words in the script.

Hook formulas

- Before you [do the expensive thing], check [3 things].
- [Number] things your [page] needs before [goal].
- Most [people] skip number [one].
- Stop [common habit]. Check this instead.

CTA

Instagram: “Comment AUDIT” (comment-to-DM). TikTok: “Free audit of your product page. Link in bio.” Reserve the keyword with keywords.py before the first post, so it does not clash with another automation.

07 · EXAMPLE

Learn post, full script and captions

Topic: what to check on a product page before testing anything. About 85 spoken words, 35 seconds.

```
HOOK (0-3 s)
Before you A/B test anything, check these three things.

LOOP (3-6 s)
Most stores skip number one.

STEP 1 (6-14 s)
One: can people see the price and the reviews on the first screen, without scrolling? Trust
starts there.

STEP 2 (14-22 s)
Two: is there one clear button? When two buttons compete, people hesitate.

STEP 3 (22-30 s)
Three: are returns and delivery written right next to the button? That is where doubt shows
up.

PAYOFF + ASK (30-36 s)
Fix these first, then test. Want us to check your page? Comment AUDIT.
```

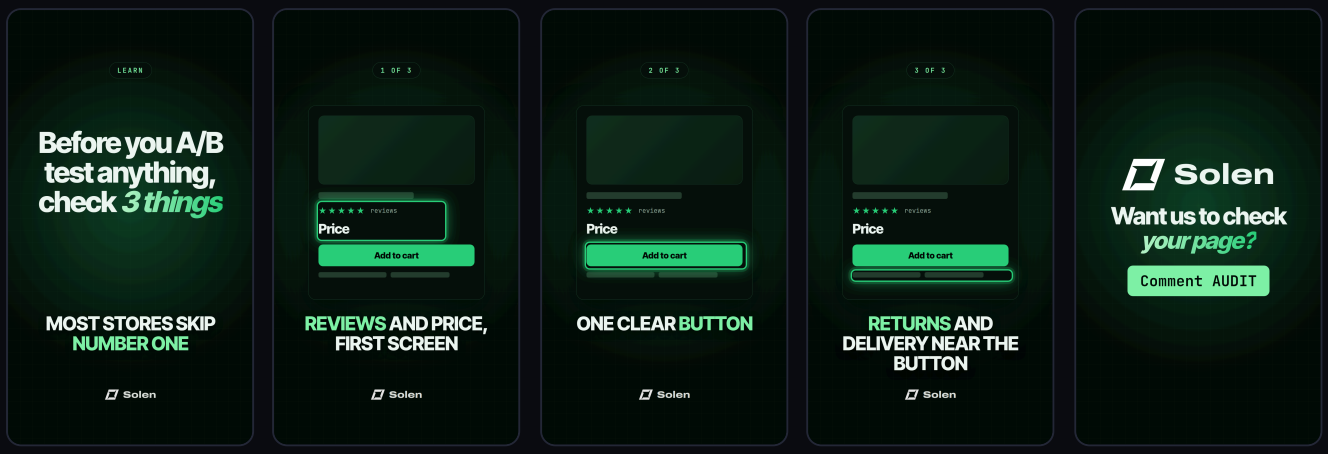

BEAT	ON SCREEN	PUNCH CAPTION
Hook	Headline, gradient on “3 things”	Most stores skip number one
1	Mock card, ring on stars and price	Reviews and price, first screen
2	Ring on the button	One clear button
3	Ring on the line under the button	Returns and delivery by the button
CTA	Logo, “Want us to check your page?”, Comment AUDIT	none

Voice-over (what the voice engine reads)

Write it so the voice says exactly what you mean: numbers as words (“three”, “one”), “A B test” instead of “A/B”, no symbols, short sentences, one idea per sentence. A full stop is a real pause. About 150 words per minute: this script is about 85 words, so about 34 seconds. Delivery: confident and warm, a little faster on the hook, slower on “number one” and on the final ask. File: **voiceover-learn-01.txt**.

07 · EXAMPLE

Storyboard, 5 frames at 1080 x 1920

0 to 6 s | 6 to 14 s | 14 to 22 s | 22 to 30 s | 30 to 36 s

The mock product page is generic on purpose: blocks, stars, the words “Price” and “Add to cart”. It shows the idea without copying a real store or a real brand. When you have real proof (a screenshot of a page, an audit result with the owner’s agreement), put it in the card instead, readable at phone size within one second.

Instagram caption

```
Before you A/B test anything, check these
3 things:

1. Price and reviews on the first screen.
Trust starts where the decision happens.
Test showing the star rating and review
count next to the price.
2. One clear button. Two competing buttons
make people hesitate. Test keeping a
single main action.
3. Returns and delivery next to the
button. Doubt shows up at the last click.
Test one line under the button.

Comment AUDIT for a free audit of your
product page.

#shopify #ecommerce
```

TikTok caption

```
Which of these 3 does your product page
skip? Free audit of your product page,
link in bio.

#shopify #ecommerce
```

Rules for every Solen short

1	No em dash and no en dash anywhere: captions, on-screen text, hashtags.
2	English only.
3	No emoji in captions or on screen.
4	No invented numbers: no revenue claims, no "+X% conversion", no fake reviews. Present fixes as things to test.
5	Hashtags: exactly **#shopify #ecommerce**.
6	CTA, Instagram: "Comment AUDIT for a free audit of your product page." TikTok: "Free audit of your product page. Link in bio."
7	Real logos of other brands only from the approved logo folder. Mock UI stays generic.
8	Nothing is scheduled without an explicit go.

Before you ship

- [ ] Logo is from the kit, correct color for the background
- [ ] One idea per frame, centered, readable at phone size in one second
- [ ] One light green word per caption, no more
- [ ] No text in the platform UI zones
- [ ] Captions match the script word for word
- [ ] CTA keyword reserved and unique
