

How to make “You met me at…” style videos

VOLUME 1 OF 3

Character creation

Build an original character in the style of a 2005 PS2 cutscene, the room he lives in, and the voice he speaks with. Everything the video model needs before you press Generate.

Persona · 3 identifiers · PS2 look · Character sheet · Sets · Style references · Voice

START HERE

What this series teaches

These videos all follow the same recipe: a CGI character from a 2005 era game cutscene looks into the camera and says out loud what your audience thinks in silence, then ends on a line people repeat. The series breaks the recipe into three volumes.

Vol. 1
Character creation
Persona, look, PS2 style, sets, voice.

Vol. 2
Video generation
Script, timing, Wan 3.0 settings, prompts.

Vol. 3
Editing
Music, lip sync, captions, end card, export.

The full workflow at a glance

STEP	WHERE	WHAT YOU GET
1. Voice	Sume · Audio · Text to speech	The voice track of your script
2. Visual assets	Sume · Image	Your character in PS2 CGI style, 3 to 4 sets, style references
3. Video	Sume · Video · Wan 3.0	A 20 s clip, 4:3, 480p, with background music
4. Music	CapCut	The background sound extracted from the clip
5. Lip sync	Sume · Lipsync · Sync Lipsync 3	The clip, his mouth synced to your voice
6. Edit	CapCut	Final video with your sound and captions

What you need

- A **Sume** account (sume.com): voice, images, video and lip sync in one place.
- **CapCut** for the edit.
- A script of about 60 words. Volume 2 gives you the structure.

STEP 1 · PERSONA

Decide who he talks to before what he looks like

The character is a mirror. He talks like your audience, knows their habits and teases them a little. Fill this card before you generate a single image: every visual choice comes from it.

Persona card

Audience	Who the video is for, in their own words. Example: people who run a Shopify store.
Attitude	One word. Example: knowing, a little smug, friendly.
Where he lives	A place your audience recognizes as theirs. Example: a gamer bedroom full of shipping boxes.
His signature line	The line he ends on. Example: "You met me at a very optimized time in my life."
What he never does	Sell features, shout, use jargon.

Good persona

Specific audience, one place, one attitude. People think "that is me" in the first 3 seconds.

Weak persona

"Entrepreneurs" in "an office". Too wide: nobody feels seen, so nobody stops scrolling.

STEP 2 · LOOK

The rule of 3 identifiers

Video models drift: hair changes color, logos vanish, outfits change between shots. The fix is to give your character exactly **three identifiers** and repeat them, word for word, in every prompt you write.

IDENTIFIER 1 · HEAD

Hair

A color, a cut and one odd detail. Jet black hair, long curtain bangs, one grey streak over the right eye.

IDENTIFIER 2 · BODY

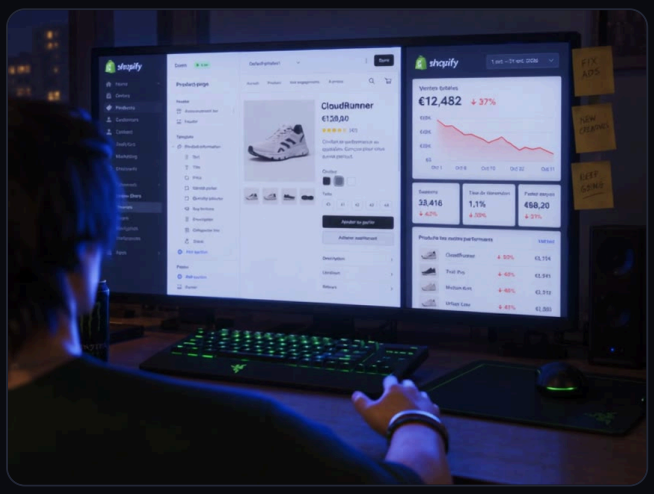

Top

One strong color and your small logo. Dark fir green t-shirt, small white logo on the chest.

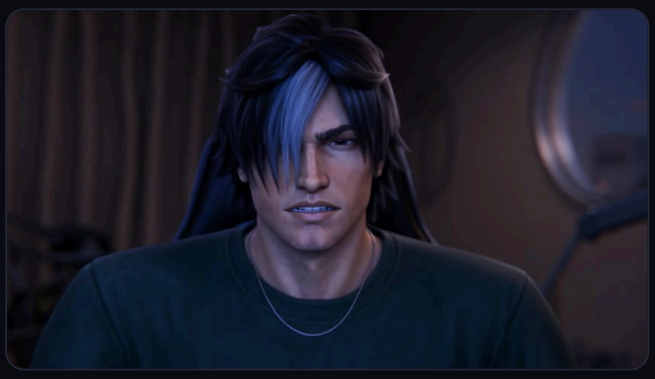

IDENTIFIER 3 · DETAIL

Accessory

Something that catches light. Silver wallet chain, bracelets.

Logo on the chest: the brand is in every close up

The streak over one eye makes him readable at a glance

> **Tip:** colored light changes hair color on screen. Add this sentence to your video prompts: "The blue tint on his hair is only the light from the screens."

STEP 3 · STYLE

Words that make it look like a PS2 cutscene

Models default to modern, photoreal rendering. To get the 2005 look you have to name the defects of that era, one by one.

ASK FOR	EFFECT ON SCREEN
Pre-rendered CGI cutscene from a 2005 PlayStation 2 game	Sets the era and the type of image
Low polygon models, visible angular edges	Faceted jaw, shoulders and fingers
Simple low resolution textures	Flat clothes and walls, no fine detail
Smooth waxy plastic skin, no pores	The doll-like skin of the period
Hair made of a few thick glossy chunks	Stops realistic strand-by-strand hair
Soft flat lighting, washed out colors, mild blur	The faded look of old cutscenes
Not photorealistic, not a modern game	A guard rail against drift

Close to the target: soft light, chunky hair

Too modern: add more of the words above

STEP 4 · CHARACTER SHEET

Generate the character image

In Sume, open **Image**. You need one clean reference image of the character: full body, face visible, neutral pose, plain background. This image goes into every video generation.

```
An original character, a man in his late 20s. [HAIR: color, cut, one odd detail]. [TOP: one strong color, small logo on the chest]. [ACCESSORY]. Standing, facing the camera, arms relaxed, neutral expression, mouth closed, full body and face visible, plain dark background. Pre-rendered CGI cutscene from a 2005 PlayStation 2 game: low polygon model with visible angular edges, simple low resolution textures, smooth waxy plastic skin with no pores, hair made of a few thick glossy chunks, soft flat lighting, slightly washed out colors. Not photorealistic. 4:3.
```

Then make two more angles

```
The same character, exactly the same: [3 IDENTIFIERS]. [ANGLE: close up of the face, looking into the camera / three quarter view, waist up]. Same rendering style. 4:3.
```

> Generate 4 options, keep the best, and save the exact text of your 3 identifiers in a note. You will paste it again and again.

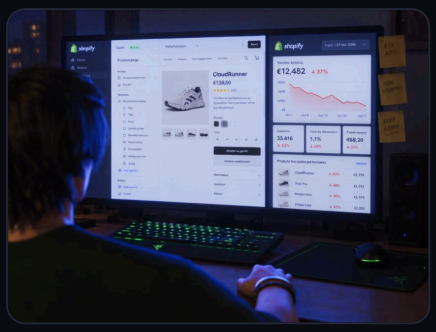

STEP 5 · SETS

Make 3 to 4 decor assets of one place

The set tells the viewer who the video is for before he says a word. Make one location and shoot it from 3 or 4 angles. Put 3 objects in it that only your audience owns.

Wide: the whole room

Desk: the monitor and its data

Corner: shelf, neon, boxes

```
Empty [LOCATION] at night, no people. [3 OBJECTS ONLY YOUR AUDIENCE OWNS]. [ANGLE: wide shot of the room / close view of the desk and monitor / corner with the shelf and the neon sign]. [LIGHT: cold blue screen light, green neon sign]. Pre-rendered CGI cutscene from a 2005 PlayStation 2 game, low polygon, simple textures, soft flat lighting, washed out colors, mild blur. 4:3.
```

Example of the 3 objects

For an ad aimed at Shopify sellers: a monitor showing a sales dashboard with a falling red chart, stacked cardboard shipping boxes, a neon sign shaped like a rising chart line.

STEP 6 · REFERENCES

Style references, used the right way

Besides your character and your sets, you can give the video model a few images whose **look** you like: the light, the rendering, the framing of old cutscenes.

Use as references

- Your character sheet and its extra angles.
- Your 3 to 4 sets.
- Images that show a lighting or a framing you like, with no recognizable person in them.

Do not use

- Frames of another creator's character. The model copies faces, outfits and logos it sees, and you end up with their character in your ad.
- Real people's faces.
- Other brands' logos.

> **Legal, read this once.** A visual style is free to use. Characters, faces and voices belong to someone. An original character is also an asset you own: every new video gets cheaper because he already exists.

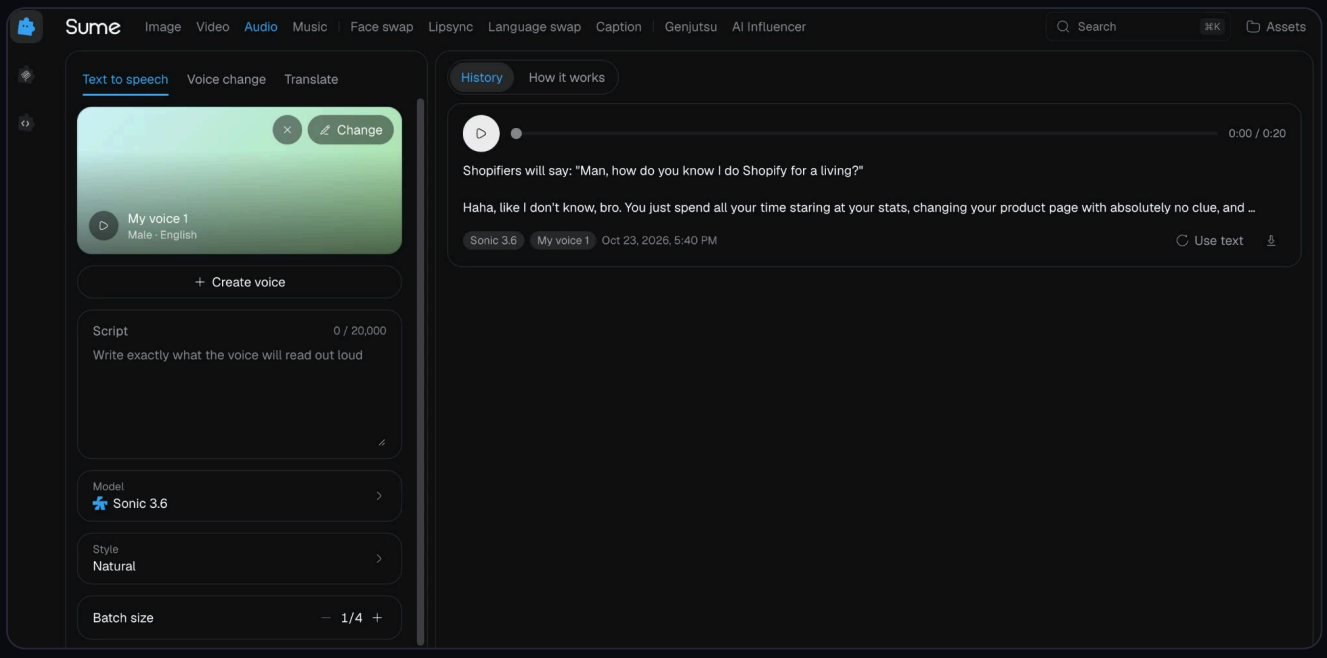

How many?

Character plus 3 to 4 sets worked best for us. If a generation fails, remove references first: start again with the character and 2 sets.

STEP 7 · VOICE

Give him a voice in Sume

Open **Audio**, tab **Text to speech**. Make the voice first: every later step is timed on it.

Sume · Audio · Text to speech. A custom voice, model Sonic 3.6, style Natural.

1 Pick or create the voice

Create voice makes a custom voice from an audio sample. Use your own voice or a voice actor who agreed in writing. Never clone a voice from someone else's video: it is their identity. Library voices work too.

2 Paste the script exactly

Model **Sonic 3.6**, style **Natural**. Write the URL as "yoursite dot com" so it is pronounced right. Punctuation drives the pauses: a period gives a real silence, which you will need to cut on.

3 Generate a batch, keep one

Batch size 2 to 4, listen, download the best. Aim for 20 to 22 seconds.

BEFORE VOLUME 2

Your asset folder and checklist

Folder structure

```
character/
  sheet-front.png
  close-up.png
  identifiers.txt
sets/
  wide.png  desk.png
  monitor.png  corner.png
references/
voice/
  script.txt  voice.mp3
```

Checklist

- [ ] Persona card filled
- [ ] 3 identifiers written once, saved
- [ ] Character sheet in PS2 style, 4:3
- [ ] 3 to 4 sets of one location
- [ ] No other creator's character, no real face, no other brand's logo
- [ ] Voice you have the right to use
- [ ] Voice track of 20 to 22 s downloaded

Vol. 1
Character creation
Persona, look, PS2 style, sets, voice.

Vol. 2
Video generation
Script, timing, Wan 3.0 settings, prompts.

Vol. 3
Editing
Music, lip sync, captions, end card, export.

Next: Volume 2, Video generation

Turn the script into a shot plan, set up Wan 3.0 (20 s, 4:3, 480p) and write the prompt that keeps your character the same from the first frame to the last.
