

How to make “You met me at...” style videos

VOLUME 2 OF 3

Video generation

Write the script, plan the shots on the voice, set up Wan 3.0 in Sume and write prompts that keep your character consistent for 20 seconds.

Script · Timing · Wan 3.0 · 20 s · 4:3 · 480p · Prompt · Troubleshooting

START HERE

Where you are in the workflow

Vol. 1
Character creation
Persona, look, PS2 style, sets, voice.

Vol. 2
Video generation
Script, timing, Wan 3.0 settings, prompts.

Vol. 3
Editing
Music, lip sync, captions, end card, export.

You need the assets from Volume 1: the character sheet, 3 to 4 sets, the voice track. This volume ends with one raw clip: 20 seconds, 4:3, 480p, your character in his room, with background music. The mouth is synced later, in Volume 3.

STEP	WHERE	WHAT YOU GET
1. Voice	Sume · Audio · Text to speech	The voice track of your script
2. Visual assets	Sume · Image	Your character in PS2 CGI style, 3 to 4 sets, style references
3. Video	Sume · Video · Wan 3.0	A 20 s clip, 4:3, 480p, with background music
4. Music	CapCut	The background sound extracted from the clip
5. Lip sync	Sume · Lipsync · Sync Lipsync 3	The clip, his mouth synced to your voice
6. Edit	CapCut	Final video with your sound and captions

The idea that saves you money

Do not ask the model to act, talk and lip sync your exact words in one pass. Ask it for a good-looking performance with music. The lip sync tool then puts your voice in his mouth. Each part is easier, and a failed step costs one step, not everything.

STEP 1 · SCRIPT

The 5 beat script

About 60 words for 20 seconds. Short sentences, because every cut happens in the silence between two sentences.

BEAT	TIME	JOB	EXAMPLE
Hook	0-6 s	Name the audience, quote their question	Shopifiers will say: "Man, how do you know I do Shopify for a living?"
Wink	6-9 s	A beat of attitude	Haha, like I don't know, bro.
Mirror	9-17 s	Habits they recognize	You just spend all your time staring at your stats, changing your product page with absolutely no clue, and wondering: "Why is my conversion rate so low?"
Punchline	17-20 s	The line people repeat	You met me at a very optimized time in my life.
CTA	end card	What to do now	Get your free audit at yoursite dot com.

```
[AUDIENCE] will say: "Man, how do you know I [THEIR JOB]?"
Haha, like I don't know, bro.
You just [HABIT 1], [HABIT 2], and wondering: "[THEIR QUESTION]?"
You met me at a very [WORD FROM YOUR WORLD] time in my life.
```

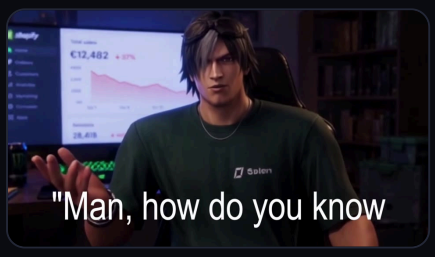

Write your own lines. Habits that are specific and a little embarrassing work better than features.

STEP 2 · TIMING

Plan the shots on the voice

Play your voice track and note when each sentence starts and ends. The shot plan follows those times: one shot per sentence, changes only in the silences.

TIME	LINE	SHOT
0-5 s	Hook	At the desk, he turns his chair to the camera, puzzled, open palm. Push-in to close up.
5-9 s	Wink	Medium close up, small smirk, the monitor visible next to him.
9-12 s	Mirror	The falling chart on screen, he glances at it and back at the camera.
12-17 s	Mirror	Close up by the green neon, tired deadpan look.
17-20 s	Punchline	Close up in blue screen light, he points at the camera, half smile.

Hook

Mirror

Punchline

> Faces carry lip sync. Plan most shots as close ups or medium close ups, face to the camera. Keep shots of the screen or of his back short.

STEP 3 · SETTINGS

Set up Wan 3.0 in Sume

Open **Video** and choose the model **Wan 3.0** (text, image and reference to video).

DURATION	ASPECT RATIO	RESOLUTION
20 s Matches a 20 to 22 s voice track.	**4:3** The old cutscene frame.	**480p** The era look, and the cheapest run.

References	Character sheet and angles, 3 to 4 sets, a few style references. No video.
Start / end frame	Leave empty. Sume accepts either frames or references, not both.
Audio	**On.** The model adds background music. You will extract it in CapCut (Volume 3) and the voice is replaced by yours with lip sync.
Price shown	$1.00 for 20 s at 480p when we made the example. Check the Generate button before each run.

> **Limits we hit:** reference clips must add up to 15 s at most, and a reference video plus the duration cannot pass 30 s. You do not need a reference video at all, so leave it out.

STEP 4 · PROMPT ANATOMY

The 7 blocks of a good prompt

Write the prompt in this order. Each block fixes one problem we met while making the example.

BLOCK	WHAT IT SAYS	PROBLEM IT FIXES
1. Continuity	One single continuous shot, no cuts	Hard cuts in the middle of a sentence
2. Framing	Close ups and medium close ups, face to camera, mouth visible	Lip sync that cannot find the mouth
3. Character	The 3 identifiers, word for word, "he is alone"	Hair, logo or outfit changing
4. Setting	The room of the set references, the light on him	Random locations
5. Style	The PS2 vocabulary from Volume 1	A modern, photoreal look
6. Timeline	What happens second by second	Static or aimless shots
7. Text	No subtitles, no text except the logo	Fake captions burned into the video

Close framing, mouth visible: easy to sync

From behind: keep it short, no sync possible

STEP 5 · PROMPT

The full prompt, ready to fill

One single continuous shot, no cuts at all. The camera moves smoothly from one position to the next, like a slow handheld camera following him in one take.
Framing for lip sync: only close ups and medium close ups. His face always faces the camera or a slight three quarter angle, fully visible, never hidden by his hands, hair or objects. His mouth is always clearly visible. No wide shots, no shots from behind.
The only character is the man from the character reference image, exactly the same during the whole video: [3 IDENTIFIERS, word for word]. [If colored light: The blue tint on his hair is only the light from the screens.] He is alone.
Setting: the [LOCATION] shown in the set reference images: [3 OBJECTS]. [LIGHT] on him.
Rendering style: exactly like the set reference images, a pre-rendered CGI cutscene from a 2005 PlayStation 2 game. Low polygon models with visible angular edges, simple low resolution textures, smooth waxy plastic skin, hair in a few thick glossy chunks, soft flat lighting, washed out colors, 480p look. Not photorealistic, not a modern game.
He talks to the camera with natural hand gestures at chest height. Background music only.
0-5s: [HOOK SHOT], slow push-in to a close up.
5-9s: without cutting, [WINK SHOT].
9-12s: without cutting, [MIRROR SHOT 1].
12-17s: without cutting, [MIRROR SHOT 2].
17-20s: without cutting, he looks straight at the camera and points at it, confident half smile.
No subtitles, no text on screen except the logo on his top.

STEP 6 · DIRECTION

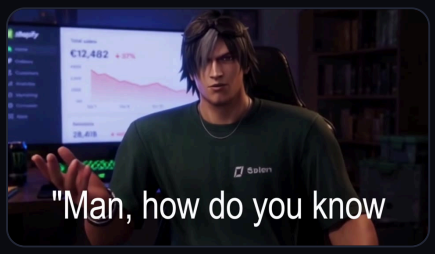

Camera moves and gestures that work

Camera

- **Slow push-in**: the default. Adds tension to any line.
- **Quick punch-in** on a key word ("bro", "optimized").
- **Small handheld movement**: never a frozen frame.
- **Glide to the side** to reveal the monitor without cutting.

Gestures

- Open palm at chest height: the confused customer.
- Glance at the screen, then back at the camera.
- Tired deadpan stare: the mirror line.
- Point at the camera: the punchline.

Open palm

Glance at the screen

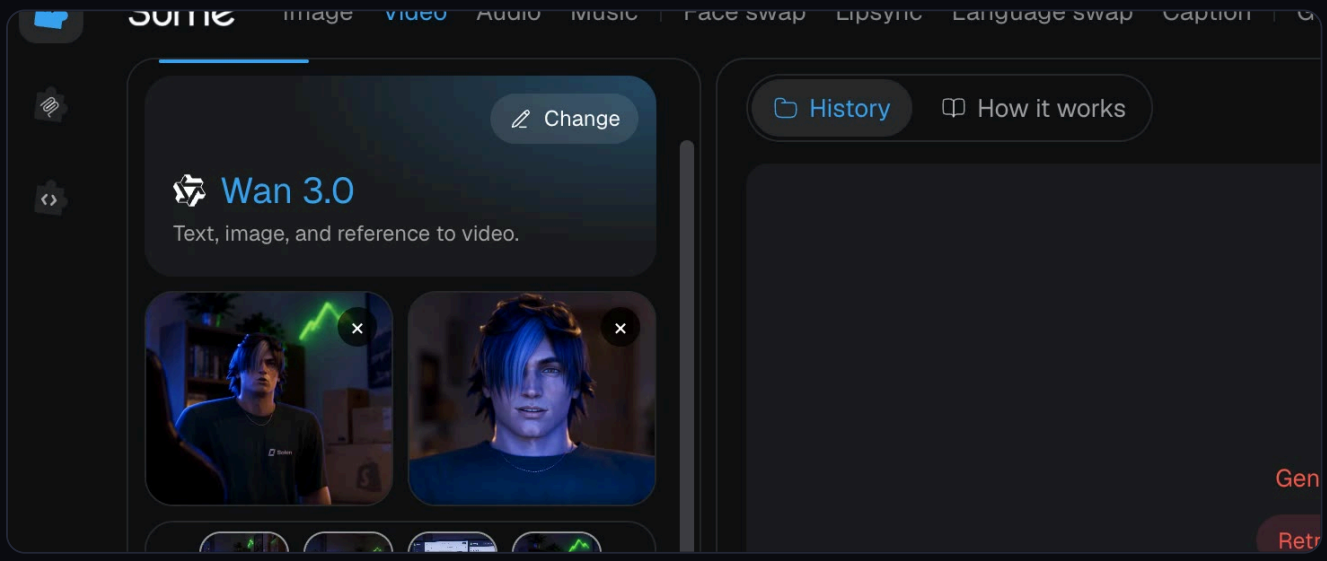

Point and smile

> Hands stay below the chin. A hand in front of the mouth breaks the lip sync for that whole moment.

TROUBLESHOOTING

Errors we hit and the fix

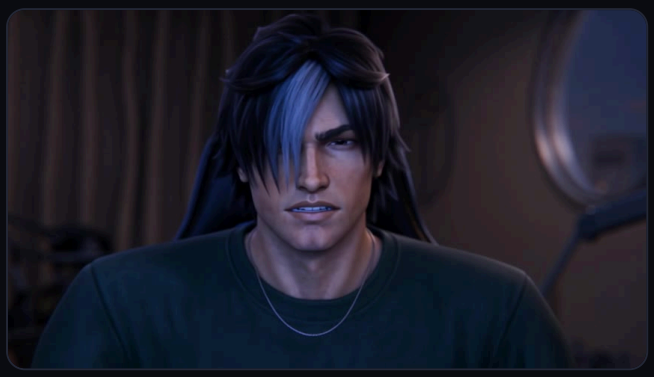

PROBLEM	FIX
"input_video_duration + duration exceeds 30s limit"	Remove the reference video. You do not need one.
"Reference clips must add up to at most 15s"	Same: no video in the references.
"Use either a start / end frame or reference media, not both"	Remove the frames, keep the references.
Generation failed	Remove a video if any, then keep only the character and 2 sets.
Hard cuts between shots	Block 1 of the prompt: one continuous shot, "without cutting" on every line.
Too realistic, looks like a new game	More PS2 vocabulary, and sets generated in the same style.
Hair or logo changes	3 identifiers word for word, the light sentence for colored hair.
Another person appears	"He is alone" and no references showing other people.

Sume refuses start / end frames and references together

BEFORE VOLUME 3

Review the raw clip

Keep: face to camera, identifiers intact

Short only: wide shot, face too small to sync

Keep the clip if

- [ ] He looks the same from start to end: hair, top, logo, accessory
- [ ] His face is visible and large in most of the clip
- [ ] No cut in the middle of a line of your voice track
- [ ] No other person, no fake text on screen
- [ ] The look is PS2 cutscene, not a modern game
- [ ] The background music fits the mood

Cost of one try, at the prices shown when we made it

Wan 3.0, 20 s, 480p: $1.00. If two of the checks above fail, regenerate rather than fixing it in the edit.

Vol. 1
Character creation
Persona, look, PS2 style, sets, voice.

Vol. 2
Video generation
Script, timing, Wan 3.0 settings, prompts.

Vol. 3
Editing
Music, lip sync, captions, end card, export.
